DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-36 are rejected under 35 U.S.C. 102(b) as being anticipated by Swen et al. (USPN 5806081), hereinafter simply Swen.

2. In regard to claims 1, 12, Swen teaches a colour management user interface controller for use in a colour management system for assisting users to manage colour settings of multiple colour entities (color devices), see col.3 line 64 - col.4 line 6, the user interface controller comprising: a representation controller (color processing system) for presenting representation of each colour entity; see col.5 lines 10-30; and a relation indicator controller (components manager) for presenting one or more relation indicators indicating colour relation between the colour entities represented by the representations (interface between components and clients). See col.5 lines 59-67.

3. In regard to claims 2, 14, 23, 28, 33, Swen teaches a colour management user interface controller for use in a colour management system for assisting users to manage colour settings of multiple colour entities, wherein the relation indicator controller has a function to allow the user to select a relation indicator to manage the colour relation between colour entities that correspond to the relation indicator. See col.6 lines 13-18.

Art Unit: 2676

4. In regard to claims 3, 15, 24, 29, 34, Swen teaches a colour management user interface controller for use in a colour management system for assisting users to manage colour settings of multiple colour entities, wherein the relation indicator controller has a function to change the appearance of a relation indicator when the relation indicator is selected by the user. See col.11 lines 54-60.

5. In regard to claims 4, 16, Swen teaches a colour management user interface controller for use in a colour management system for assisting users to manage colour settings of multiple colour entities, wherein the relation indicator controller presents the relation indicators as arrow buttons, each arrow button representing a direction of use of colour settings of a corresponding colour entity. See col.6 lines 55-60.

6. In regard to claims 5, 17, Swen teaches a colour management user interface controller for use in a colour management system for assisting users to manage colour settings of multiple colour entities, wherein the relation indicator controller presents colour relation indicators which are available for user's selection. See col.4 lines 62-67.

7. In regard to claims 6, 18, Swen teaches a colour management user interface controller for use in a colour management system for assisting users to manage colour settings of multiple colour entities, wherein the relation indicator controller has a function to generate, in accordance with the selected relation indicator, colour matching data indicating a colour entity whose colour settings is used for colour matching. See col.4 lines 62-67.

8. In regard to claims 7, 19, 25, 30, 35, Swen teaches a colour management user interface controller for use in a colour management system for assisting users to manage colour settings of multiple colour entities, wherein the representation controller has a function to associate the

Art Unit: 2676

representation of each colour entity with a colour profile of the colour entity. See col.4 lines 54-61.

9. In regard to claims 8, 20, Swen teaches a colour management user interface controller for use in a colour management system for assisting users to manage colour settings of multiple colour entities, wherein the colour management system has a colour profile storage storing colour profiles of the colour entities, and the representation controller has a function to obtain the colour profile of each colour entity from the colour profile storage. See col.5 lines 10-30.

10. In regard to claim 9, Swen teaches a colour management user interface controller for use in a colour management system for assisting users to manage colour settings of multiple colour entities, wherein the representation controller has a function to present the colour profile of the colour entities. See col.4 lines 49-61.

11. In regard to claims 10, 21, 26, 31, 36, Swen teaches a colour management user interface controller for use in a colour management system for assisting users to manage colour settings of multiple colour entities, wherein the representation controller presents the representation of a colour entity in multi levels such that standard settings are presented in a main level and detailed settings are presented in a secondary level. See col.8 lines 13-22.

12. In regard to claim 11, Swen teaches a colour management system for assisting users to manage colour settings of multiple colour entities, the colour management system comprising: a user interface controller for presenting colour relation between the multiple colour entities in accordance with colour relation setting input by a user; see col.4 lines 46-55; and a colour settings manager for controlling colour settings of the colour entities in accordance with the colour relation setting input by the user. See col.6 lines 62-67.

Art Unit: 2676

13. In regard to claims 13, 22, 27, 32, Swen teaches a method for assisting colour management of multiple colour entities, the method comprising steps of: presenting representation of each colour entity; see col.5 lines 10-30 ; and presenting one or more relation indicators indicating colour relation between the colour entities represented by the representations. See col.5 lines 59-67.
